July 26, 2006

Congressman Frank Wolf
Subcommittee on Science, State, Justice, and Commerce
H-309 The Capitol
Washington, DC 20515

Dear Chairman Wolf:

On behalf of the over 3,000 members of the Population Association of America and Association of Population Centers (PAA/APC), we are writing to express our continued support for adequate Census Bureau funding in conference. Let us begin by thanking you for holding the hearing and allowing the opportunity to provide a letter of support for full funding for the Census Bureau.

PAA/APC strongly supports the President's fiscal year 2007 budget request for 2010 census planning and the American Community Survey (ACS). Although the decennial count is just three years away the proposed \$878.2 million funding level is less than one percent above the President's fiscal year 2006 request.

The Administration's proposed funding level for the agency represents the amount needed to enable effective preparations for the decennial count and comprehensive data collection in the American Community Survey. Final preparations for the 2007 Economic Census and Census of Governments also take place next year. The Economic Census produces the nation's most comprehensive picture of key industries; the data are widely used to evaluate the health of vital economic sectors and to plan for future growth and stability. We urge you to consider the importance of this data to your constituency.

In 2007, Census activities will shift from the planning stage to preparations for the 2010 count. From questionnaire content, to technical infrastructure, to address lists and maps, the Census Bureau must make final design decisions, pull together the components of the enumeration, and begin laying the groundwork for the conduct of the census.

By law, the Census Bureau must submit proposed topics for the census to Congress by April 1, 2007. Content tests for both the decennial census short form and the related American Community Survey are taking place this year; the Census Bureau will evaluate the tests and finalize the content in the first half of fiscal year 2007. (For example, the Bureau is testing several versions of the race and Hispanic origin questions and a possible ancestry question.)

In 2007, the Census Bureau will prepare for the 2008 Census Dress Rehearsal. The dress rehearsal in San Joaquin County, CA, and several North Carolina counties will feature new methods (such as bilingual questionnaires and a targeted replacement mailing), new technologies (including hand-held computers and Global Positioning System software), updated address lists and digital maps, and new strategies for reaching hard-to-count populations. The dress rehearsal provides the only opportunity to test the integrated 2010 plan in a census-like environment.

The census relies on a complex technological infrastructure, and the Census Bureau must work with its contracting partners in 2007 to develop the framework for field data collection and data processing. A significant portion of the requested increase for 2010 census planning will fund contract management and development activities for Field Data Collection Automation and the Decennial Response Integration System. The Census Bureau has also requested funds to update the TIGER digital mapping system in 690 counties, completing a modernization project that will help census takers locate and enumerate households correctly.

Adequate funding for the census in FY2007 is a wise and necessary investment. Laying the final groundwork for innovative design features, such as mailing a second form to unresponsive households and equipping census takers with hand-held computers, will save millions of dollars in the long run and will help ensure a more accurate count in 2010 by reducing operational risk.

The ACS will enable Congress, state and local governments, businesses, and community service providers to identify emerging needs and to target solutions far more accurately than they could with census long form data.

ACS data will help public and private sector policy-makers track and analyze important trends, such as growing school-age and senior citizen populations, incidence of poverty, availability of affordable housing, households needing language assistance, and the needs of veterans. The relatively modest investment in this annual survey will allow legislators to target more effectively hundreds of billions of dollars in program funds, and businesses to invest trillions of dollars more prudently, for the betterment of all communities.

In closing, we urge you to fully fund the President's request for the Census Bureau in conference. Thank you for your consideration of our views and for your support of adequate funding for important Census Bureau activities. Your interest in demographic research has been incredibly important to our research community. This support is leading to some of the most innovative and important work in the field of demography.

Sincerely,

Alberto Palloni, Ph.D.
President
Population Association of America

Wendy Manning, Ph.D.
President
Association of Population Centers
